

SectorToken Whitepaper

Version 1.2

About

Sector is the investment company built on blockchain technologies.

Sector mission simplify investments in digital assets (cryptocurrencies and tokens) as clear and simple for all investors, as well as to provide higher profitability compared to investments in ordinary assets (deposits, shares, national currencies).

Buying a sector token (digital share), you become the owner of the most innovative and profitable crypto-assets, such as Bitcoin, Ethereum, Ripple, without spending time on self-study of this area.

Sector also attracts investments in real sector projects, choosing the most promising companies that can consistently generate profits for our investors.

Advantages of SectorToken

- 1) Ability to invest in the best crypto assets by simply buying sector token.
- 2) **Receiving dividends** for each sector token in one of the most stable cryptocurrencies – Ethereum through smart contracts technology.
- 3) Limited emission. There will be **only 100 tokens of Sector**. All company tokens will be issued at the same time. Additional token issuance will not be possible to protect investors from inflation.
- 4) Focus on the strong financial component of the project. We understand that profit is the main point of concern for investors. All efforts of the team will be aimed at ensuring stable growth of the sector token rate. This growth will be achieved through high-quality analytics of digital assets and gradual emission of sector tokens through around 4 ICOs per year with 1-2 tokens being sold. **There will be only 1 token sold in first ICO**.
- 5) Utility and Provision. Most tokens and cryptocurrencies have no real use and are just speculative financial instruments. They are not provided

with anything. Sector token **will be provided with the best digital assets**, as well as real sector assets. The practical application of the token will be associated with providing an opportunity for ordinary investors to profit from the fast-growing sphere of crypto assets.

6) In the short term, sector token will have virtually no competitors, which will highlight the token from other digital assets.
